TECHNICAL PROJECTS

Kind Words | Project Lead, Full-Stack Developer in Training | OC, CA   2020
Multi-user message & response system with real time chat features in an immersive environment
- Architected a single page app using MERN full-stack and Bootstrap modals for a seamless, interactive, and intuitive user experience
- Created a NoSQL database for data flexibility, storage scalability, and high speed response to queries
- Implemented a user login and registration using front end validations and Webtokens for secure and personal user experience
- Built a live chat functionality with Socket.IO to connect multiple logged in users in real-time

Meet Market | Full-Stack Developer in Training | OC, CA   2020
Craigslist inspired Peer to Peer platform with a facelift.
- Engineered peer-to-peer posting using Python Django for a fast project ramp-up and future scalability and designed using Bootstrap for clean and engaging user interface
- Constructed a MySQL database to tie user login/registration and listing systems with sessions and posting activity on the site.
- Implemented a lightweight Admin system using Django to oversee user activity and utilize CRUD

Activity Center | Full-Stack Developer in Training | OC, CA   2020
Community centered calendaring system where users can post and participate in activities
- Developed using C# and ASP.Net Core for high productive, quick, multi-user event planning
- Utilized front-end validation with Bcrypt password hashing to enhance user security
- Integrated Google Maps API to allow users to view location of activities
